

Product ref: SB1P

KASAR One-Piece High Density Stacking Polypropylene Chair

From: £85

A white, modern, high-density stacking chair with a curved back and a simple, sturdy frame. It is shown from a three-quarter perspective against a plain white background.

Quantity	Price
30 - 49	£91
50 - 99	£88
100 -	£85

Description

The Kasar one-piece polypropylene high density stacking chair offers exceptional storage efficiency. The chair stacks to 30 high on the optional transport drolley, or 8 high on the floor. Available in two finishes, black or white, the chair is able to fit in with most interiors. Well thought out curvature provides comfort without the need for padding. The dual-posture back angle makes the chair equally comfortable for a front-facing audience setup as well as use around tables for a cafe configuration. Suitable for indoor and outdoor use, the chair is UV resistant with a drainage hole in the seat. An optional chair connector allows the chairs to link in rows, making it a great option for churches, community buildings, schools and colleges where an audience format is required - either as the primary seating or easily stored overflow. The fibreglass reinforced polypropylene allows the chair to achieve exceptional strength despite only weighing 3.4kg. The chair meets British Standards EN581-1, EN58-2 and EN12520. [Contact the office today to borrow a sample chair, free of charge and without obligation.](#)
